vimperator_

Bagi linuxer yang sudah terbiasa dan senang menggunakan vim, vimperator akan menjadi salah satu add-on yang bakal digemari ketika menggunakan Firefox. Pada Situs Resminya (vimperator.org) dikatakan

*"**Vimperator** is a [Firefox](#) browser extension with strong inspiration from the [Vim](#) text editor, with a mind towards faster and more efficient browsing. It has similar key bindings and you could call it a modal web browser, as key bindings differ according to which mode you are in. For example, it has a special **Hint** mode, where you can follow links easily with the keyboard only. Also most functionality is available as commands, typing `:back` will go back within the current page history, just like hitting the back button in the toolbar."*

Vimperator merupakan ekstensi browser firefox dengan inspirasi yang kuat dari Vim editor teks. Dengan kata lain vimperator mempermudah kita untuk browsing lebih cepat dan lebih efisien. Vimperator dapat diunduh di situs resminya Vimperator.org.
